

## Recycling Services for

- Thermostats
- Thermometers
- Mercury Switches
- Mercury Relays
- Manometers
- Other MCMA's

Mercury is a nerve toxin that may impair the way we see, hear, walk and talk.

Very young children are more sensitive to mercury than adults. Mercury in the mother's body passes to the fetus and may accumulate there.

One teaspoon of mercury can cause severe damage to a 100-acre body of water.

Wall-mounted mercury thermostats, thermometers and mercury switches are some of the more common everyday items that are a major source of mercury in the solid waste stream.

NLR ensures that the latest processes and technology are used for the safe storage, transport and recycling of these components.

## Custom Containers & Labels:

- Large capacities available
- Easily storable/stackable
- Bar coded for tracking
- All containers labeled with EZ-read client information

# No Brokers. No Hassles. No Problems.
